1. The Election of Species requirement in the Office Action mailed 02 October 2001 is withdrawn.
2. The following is an examiner's statement of reasons for allowance: Applicants show a method of separating a substance bonded to a polymer surface through the cleavage of particular bonds utilizing a polar organic solvent. Callstrom et al US 5,736,625 and Miyashiro et al US 4,642,335, considered the closest prior art of record, show compounds bonded to proteins polymers and polypeptides respectively. Callstrom et al is directed to stabilization of proteins and does not show motivation to cleave or break particular bonds between the polymer and the linker. Miyashiro et al, while disclosing a polar solvent, states that a treatment with 8 M solution of urea (cleavage of hydrogen bond), treatment with 1 % solution sodium dodecyl sulfate (SDS) and extraction with methanol or ethyl acetate (cleavage of hydrophobic bond) is utilized to liberate compounds in which a hydrophilic polypeptide and an antryacycline antitumor substance are combined through hydrogen bonding and/or hydrophobic bonding. The prior art does not show nor fairly suggest applicants' particular process wherein the polymer surface comprising carbonyl groups and a substance comprising a linker having at least one functional group that forms a bond with a carbonyl group of the polymer surface is separated by adding a polar organic solvent.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
